

# TypeD CANTILEVER POSITIONER

**Our Type D positioner has a single column and holds the part in a cantilevered position.**

The mounting plate sits on a slewing ring bearing that has a 360° rotation installed at the end of the rotating cantilever arm attached to a single column by another slewing ring bearing. The vertical movement is provided by screw attached in line to an efficient, reliable and maintenance-free gear motor. The rotating axis can be simultaneously index with the up and down movement.

**THIS EQUIPMENT CAN BE ADAPTED AND AUTOMATED TO MEET YOUR NEEDS AND REQUIREMENTS.**
